Natural gas is odorless. A chemical called Mercaptan is added that gives natural gas a bad smell, just like rotten eggs! If you ever think you are smelling this, it could be a natural gas leak, so let an adult know or call 911 right away.

It's important to call 811 before doing any project that requires digging. Buried utility lines could be damaged if digging occurs before calling. Not only is it a smart decision to call 811, it's also the law and the service is free!

Finley wants you to play it safe when it comes to natural gas. Know what natural smells like and what to do, and always call 811 before you dig.
